

LYSOFORTE® EXTEND

A unique nutrient absorption enhancer, containing a synergistic combination of lysophospholipids, monoglycerides and a synthetic emulsifier, specifically selected and optimally balanced, to substantially improve feed efficiency and profitability.

LYSOFORTE EXTEND significantly improves the digestion of energy-rich dietary lipids, increasing the availability of energy and other fat-embedded essential nutrients for your pigs. It supports their absorption process ensuring a more efficient nutrient utilization for better production performance, at less environmental impact and lower cost.

MODE OF ACTION

- Increases emulsification of the dietary fat matrix
- Accelerates the hydrolysis and absorption of lipids
- Enhances the release of other essential nutrients from the fat matrix, including amino acids, pigments and fat-soluble vitamins
- Positively impacts the gut morphology and enhances membrane permeability, thus increasing nutrient absorption

FEATURES AND BENEFITS

- Improves growth performance and feed efficiency
- Improves carcass quality
- Supports a higher piglet weaning weight and better uniformity
- Decreases pre-weaning mortality
- Reduced growth variability
- Minimizes sow weight loss during lactation
- Is safe to use for workers, mill equipment and the environment
- Is supplied with specialized services, including application engineering, laboratory analyses and expert technical support

PACKAGING

- 25 kg bags (Dry)
- 1000 kg IBC (Liquid)
- Store in a cool dry place, in the dark and in original packaging

APPLICATION

- Can be added to the feed of
 - Sows during gestation/lactation
 - Weaned piglets
 - Growing-fattening pigs at 250-750g/ton
- Available in liquid and dry form
- Flexible in use, efficient and easy to incorporate in your diets either
 - "On top" of the existing feed formula, for enhancing piglet/sow performance
 - In a reformulation strategy in growing pigs with a proven nutritional matrix to save feed costs
