

# KEM WET™

A mixture of powerful surface-active agents with a special affinity for water-based liquids, reducing its surface tension and enhancing feed processing efficacy and safety, increasing profitability of feed processing operations.

### Advantages and benefits

- Balanced synergistic combination of powerful surface-active compounds
- Unique physical properties result in an excellent distribution of the product solution after application
- Not classified as corrosive, easy for automatic application
- Thermostable and mixed with water to form Opti CURB® K solution for feed processing benefits
- Products are safe to use for the workers, the equipment and the environment\*
- Delivered with essential services offered by engineering application, laboratory and technical support
- Cost-effective dispersing solution
- Effective at low inclusion rates

\*Always consult safety data sheet for correct handling

### Mode of action and use

Wetting agents which reduce the surface tension of hydro-soluble liquids, affecting their physical and chemical properties and leading to texturised, soaked, and conditioned feedstuff.

The water solution of KEM WET penetrates easily in feed particles and distributes uniformly achieving optimum conditions and resulting in superior feed process performance.

Use a water solution of KEM WET range of products. It results in an Opti CURB K solution to apply as a tensio-active solution to the feed material.

Recommended dosage for Opti CURB K is up to 40 kg/tonne of feedstuff depending on risk assessment and target objectives.

### Packaging

- 1000 kg containers and bulk
- Stable for 24 months
- Stored in a cool, dry place in the dark and in the original package
- Keep container closed when not in use

### APPLICABLE FOR TREATING:

FEED RAW MATERIALS

PROCESSED FEED MATERIALS

MASH & PELLETTED COMPOUND FEEDS
