

The millSMART ONLINE application is an effective dashboard which allows you to see the added value of the millSMART program in real-time.

Applicator sensor data is pushed via the industrial IoT gateway in an end-to-end secured protocol to the KEMINCONNECT™ platform where it's validated, aggregated and stored.

millSMART KPIs, based on system and process data, are visualized in smart dashboards.

Real-time data at your fingertips allows you to discover new insights and unlock the full potential.

BENEFITS

- Data-driven and fact-based business decisions
- Unlock the full potential
- Demonstrate the added value Kemin brings in real-time
- Understand better how Kemin products work and perform

FEATURES

- **Key Performance Indicators**
 - Actual Yield Gain by using millSMART
 - Unlock the potential gain
 - Carbon footprint and sustainability impact of millSMART
- **Application mode**
 - The heatmap visualizes the system's performance over time
 - Offline versus online
 - Monitor sensor calibrations
- **Mixer Moisture Profile**
 - Monitor RM moisture tendencies
 - Reduce process variation and optimize moisture levels
- **Top 10 Recipes**
 - Identify the high runners:
 - Calibrated recipes
 - Identify recipes with dry and wet raw materials
 - Manage and convert offline recipes into online
