

Kemin Mycotoxin Service Portfolio

A complete scientific support through innovative service and profound analysis

There is variety of secondary toxic metabolites produced by fungi or molds known as mycotoxins that can negatively affect animal health and performance. The seasonal dependent prevalence of mycotoxins in different feeds and feed raw materials makes it very critical for each animal nutrition and health professional to have an mycotoxin evaluation program in place.

Kemin's mycotoxin service portfolio includes on farm raw material evaluation testing, profound laboratory service on finished feed and feed raw materials products and mapping out prevalence of mycotoxins today based upon targetted animal species, raw materials, region, etc.

MYCOTOXIN SERVICE PORTFOLIO

1 | On farm mycotoxin raw material evaluation

- Rapid testing
- Quick and effective way of raw material screening
- Prediction of requirement of mycotoxin binder

2 | Profound finished feed laboratory services

- Various mycotoxin evaluation
- Variaty of matrices
- Specific and precise measurements
- Full mycotoxin risk assessment

3 | Mycotoxins today

- Thousands of mycotoxin analysis
- Regional mycotoxin data
- Seasonal mycotoxin data
- Risk assessment
- Benchmarking

With the mycotoxin service portfolio, animal nutrition and health specialist can make informed decisions on the use of their raw materials to assure high quality feed formulations and healthy animals to ultimately optimize profitability.

SERVICES FOR OUR PARTNERS

Our expert team is always available for advice and farm or feedmill visits to design tailor-made solutions. During the visit they will take samples of your feed and raw materials, and if possible, monitor the health and impact of mycotoxins on your animals. They will advise you on correct sampling procedures for mycotoxin analysis. Samples will be screened by our laboratory teams for a wide range of mycotoxins. Alternatively, we can assist you in on farm rapid mycotoxin detection. Once results are available, advice how to mitigate the mycotoxin risk is shared, a tailored strategy to your problem.
